2020 Rich Earth Virtual Summit
Reclaiming Urine as a Resource

Sept. 15 – 17
9:00 AM – 2:00 PM EDT

Join us to discuss the future of urine diversion and its re-use as a fertilizer!

For the past five years, the Rich Earth Institute’s annual urine diversion summit has brought together researchers, practitioners, policy makers, industry leaders, and students, catalyzing new collaborations and partnerships as we continue to grow the body of knowledge about this innovative practice.

This year, we’re bringing our conference online for the first time! We hope this will enable a much wider, global audience to participate in the discussion as we exchange ideas for the future of urine diversion. Recordings of each panel will be made available after the event to accommodate time zone differences and other scheduling conflicts.

RSVP now for updates about the conference, including registration information, panel themes, topic lunches, and more. Event registration will open July 1.

Admission by donation

Call For Presenters!
Have an experience, project or research results you want to share? Submit an abstract for a 6-8 minute lightning talk through the RSVP form.

Keynote Speaker:
Dr. Nancy G. Love

Dr. Nancy G. Love is the Borchardt and Glysson Collegiate Professor of Civil and Environmental Engineering at the University of Michigan, and an adjunct Professor at the Institute of Biotechnology at Addis Ababa University. In collaboration with her students, Dr. Love works at the interface of water, infrastructure and public health in both domestic and global settings. As Principal Investigator of the National Science Foundation’s INFEWS project: Advancing Technologies and Improving Communication of Urine-Derived Fertilizers for Food Production within a Risk Based Framework, she will discuss this collaborative project and her vision for the future of urine diversion and reuse.
